Activity-Based Learning (ABL) Report

Name	D. Sai Srivarsha
Roll Number	26001068
Branch	CSM (AI & ML)
Section	4
GitHub Repository	github.com/dulipudivarsha/WD-Activity-Based-Learning

Selected Case Studies

1. Online Food Ordering Website
2. Travel Agency Website
3. College Fest Management Website

Introduction

This report documents the Web Development Activity-Based Learning (ABL) assignment, in which three case studies were selected from the list of thirty provided by the department. For each case study, a complete multi-section web page was designed and developed using HTML and CSS. The source code of all three projects is maintained in a GitHub repository named **WD-Activity-Based-Learning**.

Objectives

- To apply HTML structure, forms, tables and images in real-world web page designs
- To use CSS for layout, colour, typography, responsiveness and hover effects
- To organise project files in a clear folder structure and maintain them on GitHub
- To understand and be able to explain every part of the code that was written

Tools Used

- **HTML5 and CSS3** for building and styling the pages
- **Visual Studio Code** as the code editor
- **Git and GitHub** for version control and submission
- **Web browser** (with developer tools) for testing the output and the mobile view

Case Studies at a Glance

No.	Project	Case Study	Folder
1	Online Food Ordering Website	8	01-online-food-ordering
2	Travel Agency Website	16	02-travel-agency
3	College Fest Management Website	26	03-college-fest

Project 1: Online Food Ordering Website (Case Study 8)

Aim

To design and develop a responsive food ordering interface for a restaurant, presenting restaurant details, menu categories, food items with prices, special offers and customer reviews using HTML and CSS.

Project Overview

Tasty Bites is a single-page restaurant website. A fixed navigation bar lets the user jump to the Home, Menu, Offers, Reviews and Contact sections. The home banner shows the restaurant name, tagline, opening hours and location with an *Order Now* button. The menu is divided into Starters, Main Course, and Desserts and Drinks, and every food item is shown as a card with an emoji icon, short description, price and an *Order* button. The page also includes a Special Offers section, a Customer Reviews section with star ratings, contact details and a footer.

Key Features

- Fixed navigation bar with smooth scrolling to each section
- Hero banner with restaurant details and call-to-action button
- Menu organised into three categories with nine food items and prices
- Special offers and customer review sections
- Hover effects on cards and buttons for better interactivity
- Fully responsive layout that adapts to mobile screens

Concepts and Technologies Used

Technology / Concept	Where it is used
HTML5 semantic structure	header, nav, section, footer elements and headings for each part of the page
CSS Grid	Food, offer and review cards (auto-fit columns that adjust to screen width)
CSS Flexbox	Navigation bar and centring of the home banner
Hover and transitions	Card lift effect and button colour change
Media queries	Mobile layout for screens up to 700px wide
Gradient and colour theme	Red and orange palette to suit a food brand

Project 1 - Output Screenshots

  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Tasty Bites - Online Food Ordering</title>
  <link rel="stylesheet" href="index1.css">
</head>
<body>

  <!-- Menu bar -->
  <header>
    <h2 class="logo">Tasty Bites</h2>
    <nav>
      <a href="#home">Home</a>
      <a href="#menu">Menu</a>
      <a href="#offers">Offers</a>
      <a href="#reviews">Reviews</a>
      <a href="#contact">Contact</a>
    </nav>
  </header>

  <!-- Restaurant details -->
  <section id="home">
    <h1>Tasty Bites Restaurant</h1>
    <p>Fresh and hot food delivered to your door</p>
    <p>Open: 10 AM - 11 PM | Vijayawada</p>
    <a href="#menu" class="order-btn">Order Now</a>
  </section>

  <!-- Menu categories -->
  <section id="menu">
    <h2>Our Menu</h2>

    <h3>Starters</h3>
    <div class="cards">
      <div class="card">
        <div class="emoji">🍗</div>
        <h4>Chicken 65</h4>
        <p>Spicy and crispy chicken</p>
        <p class="price">Rs. 180</p>
        <button class="order-btn">Order</button>
      </div>
      <div class="card">
        <div class="emoji">🍢</div>
        <h4>Paneer Tikka</h4>
        <p>Grilled paneer with spices</p>
        <p class="price">Rs. 160</p>
        <button class="order-btn">Order</button>
      </div>
      <div class="card">
        <div class="emoji">🍟</div>
        <h4>French Fries</h4>
        <p>Crispy golden fries</p>
        <p class="price">Rs. 90</p>
```

HTML code (Project 1)

```css
C:\Users\HP\Desktop\webactivity\01-Online-Foodordering
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

html {
  scroll-behavior: smooth;
}

body {
  font-family: Arial, sans-serif;
  background-color: #fff8f0;
  color: #333;
}

/* ---------- Menu bar ---------- */
header {
  position: fixed;
  top: 0;
  width: 100%;
  background-color: rgb(231, 162, 94);
  padding: 15px 6%;
  display: flex;
  justify-content: space-between;
  align-items: center;
  z-index: 10;
}

.logo {
  color: white;
}

nav a {
  color: white;
  text-decoration: none;
  margin-left: 18px;
}

nav a:hover {
  color: sandybrown;
}

/* ---------- Sections ---------- */
section {
  padding: 90px 6% 40px;
}

section h2 {
  color: #d62828;
  margin-bottom: 15px;
}

h3 {
  margin: 20px 0 10px;
```

CSS code (Project 1)

Result

The website displays all required elements of an online food ordering interface: restaurant details, categorised menu, prices, offers, reviews and order buttons. The layout works correctly on desktop and adjusts to smaller screens.

Conclusion

The Online Food Ordering website was completed successfully and meets the requirements of the case study. It shows how HTML and CSS alone can produce an attractive, organised and responsive interface. The project strengthened my understanding of layout techniques and page structure. In future, the site can be extended with JavaScript to add a working cart, quantity selection and order total, and with real food photographs.

Project 2: Travel Agency Website (Case Study 16)

Aim

To develop a travel portal that presents popular destinations, holiday packages with trip duration and price, and an enquiry form, using destination cards, a hero image and a responsive layout.

Project Overview

Travel Tourism is a travel agency website. The page opens with a full-width hero image and an *Explore Now* button, followed by a trip search bar where the visitor can enter the destination, mobile number, number of members and number of days. The Popular Destinations section presents Goa, Kerala and Ladakh as image cards. The Travel Packages section lists the Goa (3 Days / 2 Nights), Kerala (4 Days / 3 Nights) and Ladakh (5 Days / 4 Nights) packages with prices and *Book Now* buttons. The page ends with an About Us section, a Contact Us enquiry form and a footer.

Key Features

- Navigation bar linking to Home, Places, Packages, About and Contact
- Full-width hero banner built with a CSS background image
- Trip search bar with destination, mobile number, members and days fields
- Destination cards with image, description and View More button
- Package cards showing duration and price
- Contact form with name, mobile number, email and message fields

Concepts and Technologies Used

Technology / Concept	Where it is used
HTML5 forms	Search bar and contact form with text, number and textarea inputs
CSS Flexbox	Header, search bar and card rows
Background image	Hero section (background-size: cover, centred)
Images with img tag	Destination cards (Goa, Kerala, Ladakh)
Box shadow and border radius	Soft card and search bar design
Colour theme	Light blue and orange to suit a travel brand

Project 2 - Output Screenshots

            <a href="#home" class="c">Home</a>
            <a href="#places" class="c">Places</a>
            <a href="#packages" class="c">Packages</a>
            <a href="#about" class="c">About</a>
            <a href="#contact" class="c">Contact</a>
        </nav>
    </header>

    <section id="home" class="d">
        <div>
            <h2 class="e">Explore The World</h2>
            <p class="f">Discover beautiful places and create unforgettable memories.</p>
            <button>Explore Now</button>
        </div>
    </section>

    <div class="g">
        <div>
            <label>Destination</label>
            <input type="text" placeholder="Where to?">
        </div>

        <div>
            <label>Mobile Number</label>
            <input type="text" placeholder="Enter number">
        </div>

        <div>
            <label>Members</label>
            <input type="number" placeholder="Members">
        </div>

        <div>
            <label>Days</label>
            <input type="number" placeholder="Days">
        </div>

        <button>Search</button>
    </div>
    <section id="places">
        <h2 class="h">Popular Destinations</h2>

        <div class="i">

            <div class="j">
                <img src="tour1.png">
                <h3>Goa</h3>
                <p>Enjoy beautiful beaches and amazing sunsets.</p>
                <button>View More</button>
            </div>

            <div class="j">
                <img src="kerala.png">
```

HTML code (Project 2)

```css
C:\Users\HP\Desktop\webactivity\02-Travel-agency
*{
    margin: 0;
    padding: 0;
    box-sizing: border-box;
}

.a{
    font-family: Arial, sans-serif;
}
header {
    background-color: lightblue;
    padding: 20px;
    display: flex;
    justify-content: space-between;
    align-items: center;
}
.b{
    color: black;
}

.c{
    color: black;
    text-decoration: none;
    margin-left: 25px;
}
.d {
    height: 450px;
    background-image:url("malli.png");
    background-size: cover;
    background-position: center;

    display: flex;
    justify-content: center;
    align-items: center;
    text-align: center;
}

.e{
    font-size: 45px;
    color:blacssk;
}

.f{
    color: black;
    font-size: 18px;
    margin: 15px;
}

button {
    background-color: orange;
    border: none;
    padding: 12px 25px;
    cursor: pointer;
    border-radius: 5px;
}
.g{
    background-color: white;
    padding: 25px;
    display: flex;
    justify-content: center;
    gap: 20px;
    box-shadow: 0 2px 10px gray;
}

.glabel {
    display: block;
```

CSS code (Project 2)

Result

The website presents destinations, packages with durations and prices, a search bar and an enquiry form, as required by the case study. The hero image and cards give the page a professional travel-portal appearance.

Conclusion

The Travel Agency website was developed successfully and fulfils the case study requirements. It combines images, cards, forms and a clear colour theme into a simple and user-friendly layout. Through this project I gained practice with forms, image handling and consistent styling. Future improvements include meaningful class names, an itinerary page for each package, working form validation and a booking confirmation using JavaScript.

Project 3: College Fest Management Website (Case Study 26)

Aim

To build a college festival website that displays technical events, cultural competitions and workshops, along with the schedule, coordinators, rules and a registration form, using category-based cards and a responsive layout.

Project Overview

TechFest 2026 is a festival website for Dr. RVR NRI Institute of Technology. The home banner announces the fest with its dates and a *Register Now* button. Events are grouped into Technical Events, Cultural Competitions and Workshops, each shown as colour-coded cards (blue, pink and green) with a short description and fee. The page also contains an Event Schedule table (day, time, event, venue), Event Coordinators, Rules and Guidelines, and a Registration Form with name, roll number, email, phone, branch and event selection.

Key Features

- Event banner with fest name, college and dates
- Category-based colour cards for technical, cultural and workshop events
- Event schedule presented in an HTML table
- Coordinator contact cards and a rules list
- Registration form with labels, required fields and drop-down lists
- Dark theme with responsive layout for mobile screens

Concepts and Technologies Used

Technology / Concept	Where it is used
HTML tables	Event schedule with day, time, event and venue columns
HTML forms	Registration form with label, input, select and required attributes
CSS Grid	Event and coordinator cards (auto-fit columns)
Class-based styling	Separate colours for .tech, .cultural and .workshop cards
Focus states	Highlighted border on form fields while typing
Media queries	Mobile layout for screens up to 700px wide

Project 3 - Output Screenshots

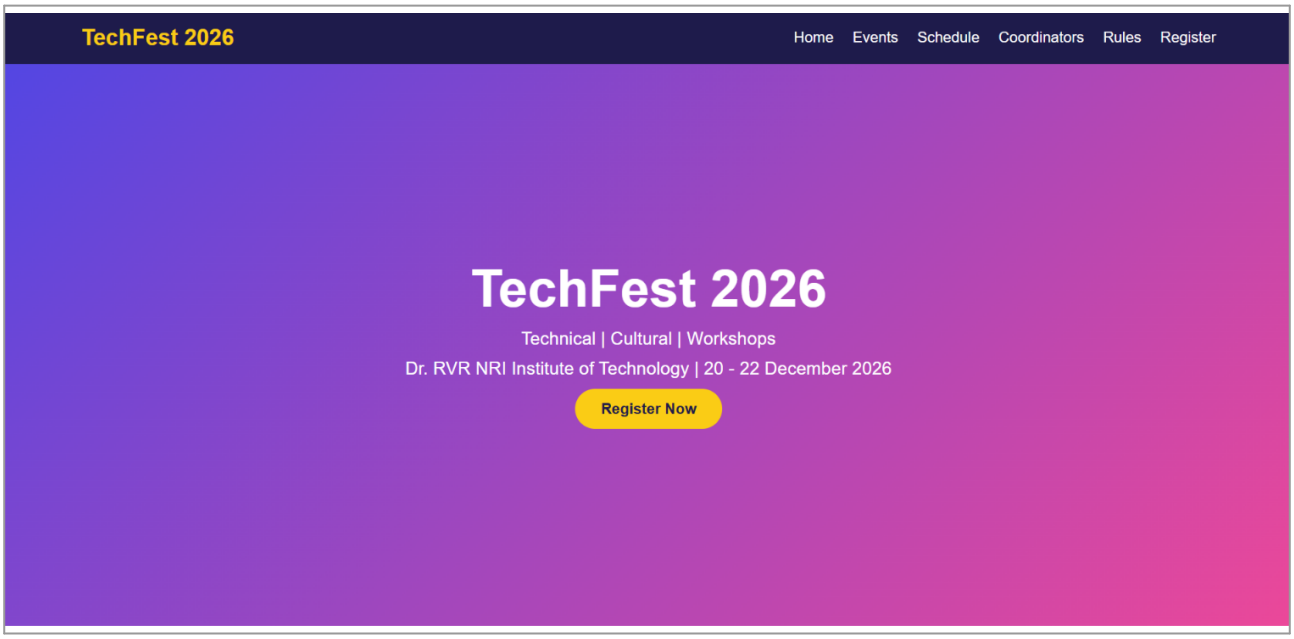

Fig 3.1 - Event banner with fest details and Register Now button

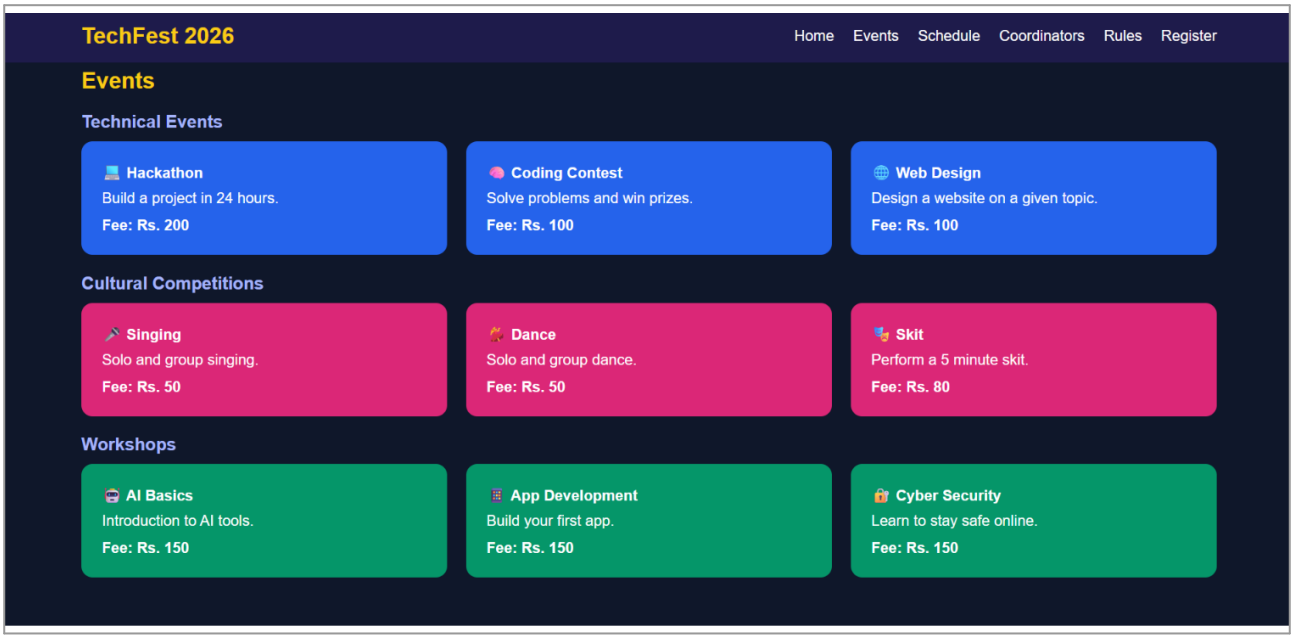

Fig 3.2 - Category cards: Technical Events, Cultural Competitions and Workshops

Fig 3.3 - Event Schedule table

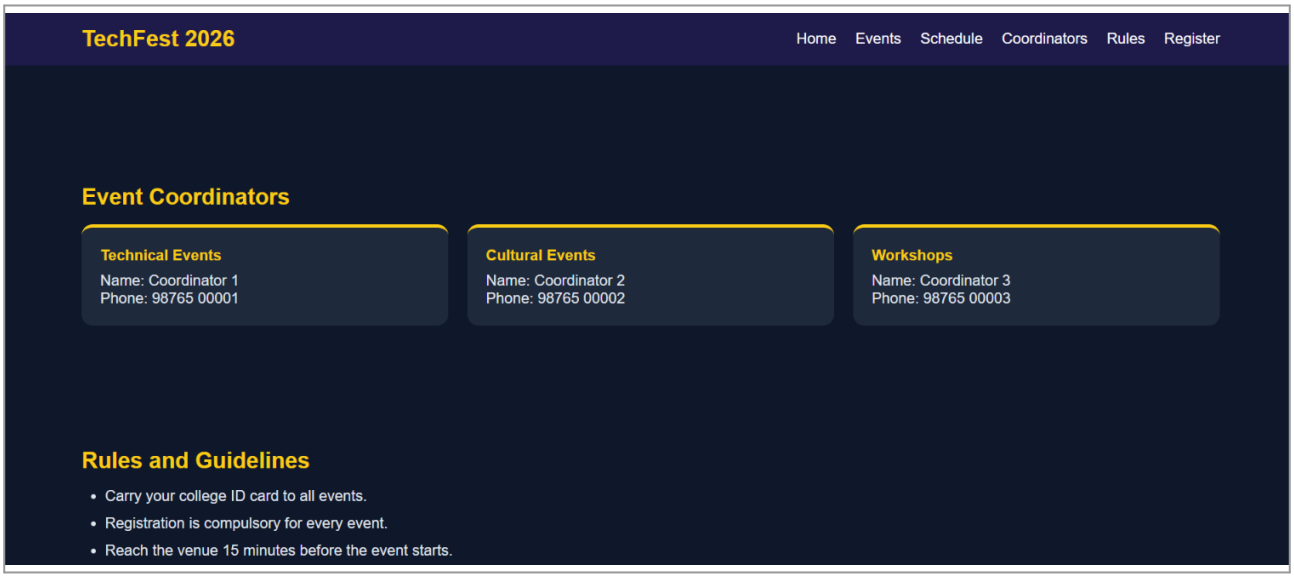

Fig 3.4 - Event Coordinators and Rules and Guidelines

Project 3 - Source Code

```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>TechFest 2026 - College Fest</title>
  <link rel="stylesheet" href="index3.css">
</head>
<body>

  <!-- Menu bar -->
  <header>
    <h2 class="logo">TechFest 2026</h2>
    <nav>
      <a href="#home">Home</a>
      <a href="#events">Events</a>
      <a href="#schedule">Schedule</a>
      <a href="#coordinators">Coordinators</a>
      <a href="#rules">Rules</a>
      <a href="#register">Register</a>
    </nav>
  </header>

      </div>
    </div>

    <h3>Cultural Competitions</h3>
    <div class="cards">
      <div class="card cultural">
        <h4>🎤 Singing</h4>
        <p>Solo and group singing.</p>
        <p class="fee">Fee: Rs. 50</p>
      </div>
      <div class="card cultural">
        <h4>💃 Dance</h4>
        <p>Solo and group dance.</p>
        <p class="fee">Fee: Rs. 50</p>
      </div>
      <div class="card cultural">
```

HTML code (Project 3)

```css
* {
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

html {
  scroll-behavior: smooth;
}

body {
  font-family: Arial, sans-serif;
  background-color: #0f172a;
  color: #e2e8f0;
}

/* ---------- Menu bar ---------- */
header {
  position: fixed;
  top: 0;
  width: 100%;
  background-color: #1e1b4b;
  padding: 15px 6%;
  display: flex;
  justify-content: space-between;
  align-items: center;
  z-index: 10;
}

.logo {
  color: #facc15;
}

nav a {
  color: white;
  text-decoration: none;
  margin-left: 16px;
}

nav a:hover {
  color: #facc15;
}

/* ---------- Sections ---------- */
section {
  padding: 90px 6% 40px;
}

section h2 {
  color: #facc15;
  margin-bottom: 15px;
}

h3 {
  margin: 20px 0 10px;
  color: #a5b4fc;
}

/* ---------- Banner ---------- */
#home {
  min-height: 100vh;
  display: flex;
  flex-direction: column;
  justify-content: center;
  align-items: center;
  text-align: center;
  background: linear-gradient(135deg, #4f46e5, #ec4899);
```

CSS code (Project 3)

Result

The website covers every item listed in the case study: event categories, schedule, coordinators, rules and registration. The colour-coded cards make the event types easy to tell apart, and the form is clearly labelled and easy to fill.

Conclusion

The College Fest Management website was completed as per the case study and presents all festival information in a clear and organised way. It gave me good practice in tables, forms and category-based styling. As an extension, JavaScript can be added to validate the registration form, store the entries and show a confirmation message, and a gallery of past events can be included.

Overall Learning Outcomes and Conclusion

Learning Outcomes

- Designed and developed three different types of websites: a restaurant site, a travel portal and an event site
- Used semantic HTML, forms, tables and images appropriately for each type of content
- Applied CSS Flexbox, Grid, gradients, hover effects and media queries to create responsive layouts
- Organised the work in separate project folders and published it on GitHub with a README file
- Improved the ability to read, explain and debug my own code

Conclusion

Through this Activity-Based Learning assignment, the concepts taught in the Web Development course were applied to complete, practical web pages. Each project used a different layout and a different set of features, which gave wide practice across HTML structure, CSS styling and responsive design. The assignment also introduced a proper development workflow using Visual Studio Code, Git and GitHub. The skills gained here provide a strong base for learning JavaScript and building more interactive and dynamic websites in the coming semesters.
